ACRYPOL+

Application Guide

SURFACE PREPARATION
Remove all loose dirt, contamination, moss, lichen and standing water. Stone chippings should be removed by scraping or other mechanical means. Where fungal growth has been present apply an appropriate fungicidal wash in accordance with the manufactures instructions. In the case of metal surfaces all that is required is cleaning with a wire brush to remove contamination and provide a strong surface key. The same procedure is applicable to PVC.
NB: Special attention should be given to the preparation of Aluminium, Zinc, Galvanised or Corroded Metal. Refer to Acrypol Products Limited for instructions.
PRIMER/SEALERS
Generally ACRYPOL + requires no Primer/Sealers, however, on rare occasions i.e. highly porous/able surfaces eg. concrete, asbestos or where stone chippings have been removed, better application results may be obtained by first applying the recommended Acrypol Sealer.
Concrete, Asbestos, Cement and Bituminous Surfaces use Acrypol Sealer (AS 8000). Apply by brush or roller at a coverage rate of 5-8m²/L depending on surface porosity. The surface should be clean and dry during application. Drying time 2 hours at 18°C-21°C.

CRACKS, Splits and Fissures
ACRYPOL + will fill and bridge cracks up to 10mm wide. Thereafter, all voids should be filled with an appropriate flexible filler and allowed to set or dry. Alternatively the void may be covered with a heavy duty adhesive tape i.e. Builders or Duct Tape and then overcoated with a liberal 15cm wide brush stroke of ACRYPOL +. Whilst the coating is wet a strip of 15cm wide Acrypol Flexible Scrim should be beaded into the coating and allowed to settle overnight prior to the next stage.
RENOVATION
ACRYPOL + may now be applied to the correctly prepared surface/substrate by brush or the unique Acrypol Sprayer at a coverage rate of 1-4m²/ 1L minimum - 2kg/m². Coverage rates can vary depending on surface porosity and texture. When the surface is damp the ACRYPOL + should first be worked into the surface with the brush or squeegee in a circular motion to remove excess moisture and ensure total adhesion prior to brushing out fully.

"IMPORTANT"
ACRYPOL + is not suitable for balconies and walking surfaces, nor recommended for the treatment of wooden surfaces, tanking, flatpods or internal use. Air conditioning vents should be sealed for a minimum of 48 hours during and after the application of ACRYPOL +

SOLAR PROTECTION WARNING
Due to the deterioration of the earth’s ozone layer. We strongly recommend the specification of SOLAR WHITE ACRYPOL + for maximum solar reflectivity and protection against the increased intensity and damage caused by ultra violet rays.

CONDITIONS OF SALE CAN BE SUPPLIED UPON REQUEST
The above application instructions are for guidance only and do not constitute any warranty or guarantee, under no circumstances will Acrypol Products Limited be responsible for any damage caused directly or indirectly by the use of its products. Where specific instructions are required refer to Acrypol Technical advice service.

ACRYPOL+ roof coating was specifically developed to provide a solution for carrying out the day to day maintenance requirements of those involved in roof waterproofing protection. As with most water penetration problems associated with leaking roofs, the need to carry out remedial repairs is very rarely possible during long spells of inclement weather. This is mainly due to the fact that in order to carry out an effective long term repair to leaking roofs, it is generally necessary to ensure that the surfaces to be treated are completely dry.

ACRYPOL+ can be applied during damp weather conditions and at the same time provide a long term solution to the problem. The all-weather application properties, combined with the simplicity of application, makes this product a particularly attractive proposition to those employing their own labour force for general property maintenance. The versatility of ACRYPOL+ is acknowledged widely by Municipal Authorities and Maintenance Contractors throughout the United Kingdom.

Consider these advantages
- DAMP WEATHER APPLICATION
- MAXIMUM SOLAR REFLECTIVITY
- READY TO USE
- SINGLE COAT APPLICATION
- INSTANT WATERPROOF PROTECTION WITHOUT WASH OFF
- FIBRE REINFORCED SEAMLESS MEMBRANE
- UNAFFECTED BY TEMPERATURE CHANGE
- EXCELLENT FLEXIBILITY
- OUTSTANDING ADHESION
- INDEFINITE SHELF LIFE
- CUSTOM DEVELOPED ACRYLIC RESIN
- ECONOMICAL

ACRYPOL+ Solar White Roof Coating applied as a total waterproof system over existing bituminous felt roof.

Product Description
ACRYPOL+ is an acrylic resin dispersed in a solvent to form a semi-liquid paste. The coating film dries into a tough durable elastic overlay that prevents the passage of water, yet is chemically structured to allow trapped moisture to evaporate, thus avoiding the formation of blisters. A specific feature is incorporated with added fibres, fibres that act like a built-in scrim. These fibres interface when the coating is applied – filling and bridging gaps and cracks (up to 10mm wide). The fibres increase the tensile strength of the dry film making it more durable – A BIG PLUS!

ACRYPOL+ is available in two standard colours, Solar White for maximum solar protection of the roof surface, and Medium Grey generally used for day to day patching repairs where it is preferable to blend the coating into surrounding building material colours. In certain areas where minimal structural movement occurs and tensile strength is not of paramount importance, eg. corrugated asbestos sheeting, or where spray application of the coating is required, the product is available without fibres under the description of standard ACRYPOL which is also available in Solar White or Medium Grey colours.

Tailor made solution for the waterproof protection of:
- FLAT ROOFS
- PITCHED ROOFS
- ASPHALT
- BITUMINOUS SURFACES
- ROOFING FELT
- GUTTERS
- LEADWORK
- SLATES
- FLASHINGS
- GLASSHOUSES
- METALS
- ASBESTOS
- CONCRETE
- BRICKWORK
- ROOF LIGHTS
- PVC
