## Fibre cement – The short version

### What is fibre cement?

Cembrit fibre-reinforced cement is a resilient construction material that is ideal for all kinds of exterior and interior protective surfaces. It is easy to handle which makes it versatile and suitable for many facade applications and details.

Cembrit fibre cement products are resilient on exposure to freeze-thaw, snow, rain, heat, humidity and direct sunlight.

Fibre cement features a high pH value that makes it resistant to algae and bacteria and the growth of moss, fungi etc. – even in more demanding sub-tropical climates.

Cembrit fibre cement can absorb and release moisture for unlimited cycles without affecting the product's durability.

### Why choose Cembrit fibre cement products?

Besides being resistant towards rot and fungal growth, Cembrit fibre cement products require only a minimum of maintenance. Adding to this, all Cembrit fibre cement products are non-combustible which means that they have a better fire resistance than timber or plastic based alternatives.

With more than 90 years of experience manufacturing fibre cement, Cembrit offers tried and tested solutions for various building applications. We strive to deliver the best possible solution for you, your family and your home. We want to make your life easier and better. At Cembrit we are Building Better Days.

## Looking for the natural look and feel of wood?

**15 year Cembrit warranty\***

**Natural look with limited maintenance**

**Complete range of finishing trims**

**Exceptional UV resistance**

\* On completion of site registration documents. Terms and conditions apply.

# Cembrit Plank

Cembrit Plank (c)

Cembrit Plank Smooth (s)

### Properties

Length	3600mm
Width	180mm
Thickness	8mm
Weight pcs	7.75kg
Surface	Cedar/Smooth
Usage m <sup>2</sup> (incl. overlapping)	1.85 pcs
